Developer and Project Team Discussion

Meeting Notes

Document Field	Details
Project	VoidMeet
Date Recorded	Oct 5, 2026
Time	3:15PM – 4:00PM
Location	Cisco Lab – UET Peshawar
Note Taker	Muhammad Abdullah Sohail
Attendees	Afaq Aslam, Marwan Ali, Muhammad Abdullah Sohail and Muhammad Inshal Saqib
Document Version	V0.3
Prepared by	Marwan Ali

6. Action Items 5
7. Open Questions 6
8. Evidence and Document Control 6
9. Completion Notes 6

1. Purpose

The purpose of this discussion was to identify project-specific and implementation-aware requirements that may not be fully captured by a general user survey, and to consider how these requirements fit with the requirements already gathered.

2. Discussion Summary

Topic	Problem / need identified	Discussion outcome / requirement	Status
Attendance system	Hosts and organizers need to know who attended a meeting and for how long.	Record each participant's join time, leave time and total presence duration. The host or authorized organizer can view an attendance report (FR-54, FR-55, FR-56); access is restricted by BR-14.	Agreed
Join/leave accuracy	Attendance is reliable only if join, leave and reconnect events are recorded consistently. Reconnection should not create duplicate attendance or lose presence time.	Record join/leave events consistently enough to calculate reliable presence duration (NFR-15).	Agreed
Meeting state and recovery	A server restart could destroy an active meeting's state.	Preserve and restore chat, whiteboard content, settings and relevant participant information after a restart (FR-60, NFR-06).	Agreed
Media backend	A production media backend needs to be selected. The original notes record the outcome; the stated problem is inferred.	LiveKit is the intended production media backend (CR-01).	Agreed
Translation	Translation should remain free of cost and continue if an engine fails or becomes slow.	Use only free translation engines (CR-02, BR-10), with fallback engines (NFR-05†).	Agreed
Security and abuse	Credentials must not be exposed, and the system should be protected against abuse and overload. The stated problem is inferred from the recorded outcome.	Keep API keys and credentials outside source code (CR-06); rate limiting is required (NFR-04).	Agreed
Current design	The current implementation holds meeting state in server memory with file-based persistence.	Record this as a current implementation detail (CR-08†). No change or decision was recorded.	Pending — no decision recorded

Evidence notation. "Inferred" means the original notes record the outcome but not the stated problem. † means the requirement reference was taken from the Requirements Elicitation Report and was not cited in the original meeting notes.

3. Decisions Recorded

Decision ID	Decision	Requirement reference(s)
D-1	Include attendance tracking and a host-facing attendance report.	FR-54–FR-56; NFR-15; BR-14
D-2	Persist meeting state and restore it after a restart.	FR-60; NFR-06
D-3	Use LiveKit as the intended media backend and use only free translation engines.	CR-01; CR-02; BR-10
D-4	Keep secrets out of source code and require rate limiting.	CR-06; NFR-04
D-5	Restrict attendance reports to authorized meeting roles.	BR-14

4. Requirements, Business Rules and Technical Items

Category	ID	Description
Functional requirement	FR-54	The system records each participant's join time and leave time.
Functional requirement	FR-55	The system calculates each participant's total presence duration.
Functional requirement	FR-56	The host or authorized organizer can view an attendance report containing participant name, join time, leave time and presence duration.
Functional requirement	FR-60	Meeting settings, whiteboard, chat and relevant meeting state are persisted and restored after a server restart.
Non-functional requirement	NFR-15	Attendance accuracy: join/leave events are recorded consistently enough to calculate reliable presence duration.
Non-functional requirement	NFR-06	Availability/recovery: the application restarts after crashes and restores persisted meeting state.
Non-functional requirement	NFR-04	Abuse protection: rate limits and bounded speech input reduce overload and abuse.
Non-functional requirement	NFR-05†	Reliability: translation engines support fallback behavior.
Business rule	BR-14	Attendance reports are restricted to authorized meeting roles.
Business rule	BR-10	Translation must use free engines under the current project constraint.
Technical constraint / decision	CR-01	Production media transport uses LiveKit.
Technical constraint / decision	CR-02	Only free translation engines are permitted under the project constraint.
Technical constraint / decision	CR-06	API keys and credentials must remain outside source code.
Current implementation detail	CR-08†	Meeting state is held in server memory with file persistence.
Unresolved questions	Q-1–Q-5	See Section 7 of this document.

Reference note. † indicates a reference taken from the Requirements Elicitation Report; the reference was not cited in the original notes. The descriptions follow the wording recorded in that report.

5. Requirements Traceability

Requirement ID	Source / origin	Elicitation outcome	Follow-up
FR-54, FR-55, NFR-15	Developer and Project Team Discussion	Attendance tracking: join/leave times and presence duration are recorded consistently.	A-04 — validate feasibility of attendance persistence
FR-56, BR-14	Developer and Project Team Discussion	Host or organizer can view an attendance report; access is restricted to authorized roles.	A-03 — define access rules; Q-1 — confirm export formats
FR-60, NFR-06	Developer and Project Team Discussion. NFR-06 also appears under "Network instability" in the Elicitation Report†.	Meeting state is persisted and restored after a restart.	A-06 — define acceptance criteria and tests
CR-01	Developer and Project Team Discussion	LiveKit remains the intended media backend.	A-05 — transfer approved requirement into SRS
CR-02, BR-10	Developer and Project Team Discussion	Only free translation engines are used under the project constraint.	A-05 — transfer approved requirement into SRS
CR-06, NFR-04	Developer and Project Team Discussion	Secrets remain outside source code; rate limiting is required.	A-05 and A-06

Source limitation: the original notes do not establish a link to a survey or stakeholder interview for these items, except where marked †. Any additional source link remains to be confirmed.

6. Action Items

Action ID	Task / deliverable	Responsible person	Target deadline	Status
A-01	Review the consolidated requirements with the project team.	To be assigned	To be assigned	To be confirmed
A-02	Confirm open questions with relevant stakeholders.	To be assigned	To be assigned	To be confirmed
A-03	Define retention and access rules for attendance, transcripts, recordings and Minutes of Meeting.	To be assigned	To be assigned	To be confirmed
A-04	Validate technical feasibility of attendance persistence, screen annotation, code formatting and whiteboard export.	To be assigned	To be assigned	To be confirmed
A-05	Transfer approved requirements into the final SRS.	To be assigned	To be assigned	To be confirmed
A-06	Define acceptance criteria and test cases for high-priority requirements.	To be assigned	To be assigned	To be confirmed

7. Open Questions

ID	Question	Why it matters	Stakeholder to consult	Resolution method	Status
Q-1	Should attendance reports be downloadable as CSV/PDF, or only viewable in VoidMeet?	FR-56 describes viewing a report; export changes delivery and may affect access controls (BR-14).	To be confirmed	To be confirmed	Open
Q-2	How long should attendance records, transcripts, recordings and minutes be kept?	Retention rules are needed for meeting outputs (A-03); the Elicitation Report identifies privacy and storage concerns.	To be confirmed	To be confirmed	Open
Q-3	Should Minutes of Meeting be entered manually, generated automatically, or both?	This determines how FR-52† is designed; the Elicitation Report says the balance needs confirmation.	To be confirmed	To be confirmed	Open
Q-4	Should screen annotation be available to all presenters or only explicitly authorized users?	Defines who may annotate shared content (FR-27†) and affects synchronization.	To be confirmed	To be confirmed	Open
Q-5	Which programming languages should whiteboard code formatting support?	Sets the scope of formatted code blocks on the whiteboard (FR-44†).	To be confirmed	To be confirmed	Open

8. Evidence and Document Control

Field	Details
Document version	1.1 – revised draft
Prepared by	Void Phantoms – VoidMeet project team
Reviewed / confirmed by	Pending
Meeting reference	To be confirmed
Related elicitation activity	Developer and Project Team Discussion; Requirements Elicitation Report, Section 6
Supporting evidence	To be confirmed; attach supporting evidence if available
Approval / signature	Pending

9. Completion Notes

Before submitting this document as final evidence, the team should fill in only the missing details that can be verified, confirm the open questions, and obtain review or approval if required by the instructor. Do not add meeting times, signatures, recordings or other evidence unless they exist.
